Social Credit Evaluator

By Kumar Chandra, Rebecca Wang, Nathaniel Thomas

Together!

— — —

THe glory of the chinese communist party should be shared together with everyone. Praise Xi Jingping!!!!!!

Now a word from our sponsor!

https://socialcreditevaluator-production.up.railway.app

Go to this link to test it out yourself!!

The worst part about this is that its not even that bad

Like this acc gives responses that i would prob give

Legitimate challenges that we had

———

- Internet was slow!! Like super slow!! (couldn't download packages)
- Finding a good way to evaluate peoples readme and bios
  - Handling all cases is hard
- Python flask was hard to figure out
  - None of us have used it before or done any web dev
  - We don't even use python
- Getting it to be hosted on Railway
  - Servers are slow
  - Vercel, Heroku, never deployed on Railway
- Learned a quack lot

Why are we unique?????

———

Many other services try to calculate how good a person's github profile. However the issue is that these are usually lame and serious and unfunny. They also are very generous with their points which is bad!

Is their interest in this?

Hi Mr. Xi Jingping,

In these trying times i understand that its important to be loyal to the ccp. Thats why we have created a system to evaluate a potential website to evaluate the social credit score of an individual based on their github profile. THe link to the website is here : https://socialcreditevaluator-production.up.railway.app . I hope you like it, if you have any intentions of using this, please email us back. Thank you!!!

Thanks,

A faithful party member

Thank you!!!!

and quack
